Building a Store Locator ASP.NET Application Using Google ...

A store locator lets a visitor enter an address or postal code and then shows the nearby stores. Typically, store locators display the nearby stores on both a map and in a grid, along with the distance between the entered address and each store within the area. To see a store locator in action, check out the Wells Fargo store locator.

The starter kit contains a GeoJSON file called `list_of_locations.geojson` where you'll find all the current store locations that are visible on the map. GeoJSON is a file format for geospatial data and a subset of the JSON format. In this section, you'll update the sample data to reflect your actual store locations. Locate the `list_of_locations.geojson` file in `app > src > main > assets`.
